

# Ganson N

Wine grape variety.

## Origin

This variety was obtained in 1958 by INRA by crossbreeding Grenache and Jurançon.

## Use

Wine grape variety.

## Name of the variety in France

Ganson

## Synonymy

There is no officially recognized synonym in France nor in the other countries of the European Union, for this variety.

## Regulatory data

In France, Ganson is officially listed in the "Catalogue of vine varieties" on the A list and classified.

## Description elements

The identification is based on:

- the tip of the young shoot with a medium density of prostrate hairs,
- the green young leaves with bronze spots,
- the shoots with red-striped internodes,
- the circular adult leaves, with three or five lobes, shallow lateral sinuses, a closed petiole sinus or with overlapping lobes, small teeth, short to medium with straight sides, no anthocyanin coloration of veins, and on the lower side of the leaves, a low to medium density of erect hairs,
- the round-shaped berries.

### Cultivation and agronomic skills

This variety is fairly early and has an erect bearing. It has a steady production and is sufficiently fertile to be pruned short and trained in gobelet.

### Clonal selection in France

The only certified Ganson clone carries the number 534.

### Phenology

Bud burst: 6 days after Chasselas.

Grape maturity: mid-season, 3 weeks after Chasselas.

### Technological potential

The bunches and berries are large. Ganson produces fine wines which are not very colored and not very typical.

### Susceptibility to Diseases and Pests

Ganson is not very sensitive to grey rot.

### Debourrement

### Maturité
