

# Gramon N

# Wine grape variety.

### Origin

This variety was obtained in 1958 by INRA by crossbreeding Grenache and Aramon.

### Use

Wine grape variety.

### Name of the variety in France

Gramon

### Synonymy

There is no officially recognized synonym in France nor in the other countries of the European Union, for this variety.

### Regulatory data

In France, Gramon is officially listed in the "Catalogue of vine varieties" on the A list and classified.

### **Description elements**

The identification is based on:

- the tip of the young shoot with a medium density of prostrate hairs,
- the green young leaves with bronze spots,
- the circular adult leaves, entire or with three lobes, with a slightly open petiole sinus, short teeth with straight sides, a revolute slightly goffered leaf blade, undulate between the veins, and on the lower side of the leaves, a low density of erect and prostrate hairs,
- the round-shaped berries.

### **Evolution of cultivated areas in France**

Year	1988	2000	2008	2018
ha	18	18	5	2.8

## **Genetic profile**

MicrosatelliteVVS2		VVMD5	VVMD7	VVMD27	VRZAG62	VRZAG79	VVMD25	VVMD28	VVMD32
Allele 1	131	232	243	191	188	258	240	227	239
Allele 2	143	238	243	191	188	258	240	243	249

### Cultivation and agronomic skills

Gramon has an erect bearing. It is sufficiently fertile to be pruned short and trained in gobelet. It sometimes displays a certain susceptibility to millerandage.

### **Clonal selection in France**

The only certified Gramon clone carries the number 535.

### Phenology

Bud burst: 5 days after Chasselas.

Grape maturity: late-season, 4 weeks after Chasselas.

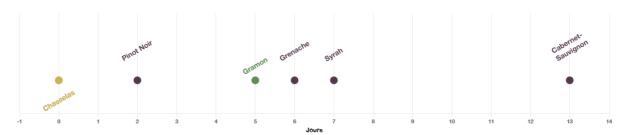

### **Technological potential**

The bunches are large and berries are medium in size. Gramon has a good sugar accumulation potential and produces generous wines which are not very tannic but are moderately colored.

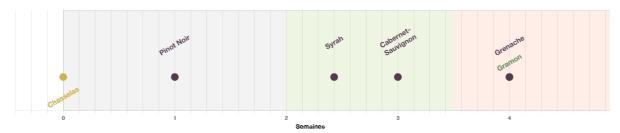

### Susceptibility to Diseases and Pests

Gramon resists well against grey rot but is susceptible to mites.

### Debourrement

### Maturité
