

# **Gringet B**

Wine grape variety.

### Origin

This variety is native from the Haute-Savoie region (Arve valley) and specific to the area.

### Use

Wine grape variety.

### Name of the variety in France

Gringet

### Synonymy

There is no officially recognized synonym in France nor in the other countries of the European Union, for this variety.

### Regulatory data

In France, Gringet is officially listed in the "Catalogue of vine varieties" on the A list and classified.

### **Description elements**

The identification is based on:

- the green young leaves,
- the circular adult leaves, entire or with three lobes, with a slightly open or closed petiole sinus, short to medium teeth with straight or convex sides, no anthocyanin coloration of veins, a flat leaf blade, and on the lower side of the leaves, a low density of prostrate hairs,
- the round-shaped berries.

Allele 2	149	234	257	186	196	260	248	263	271

### Cultivation and agronomic skills

This variety is moderately productive with a drooping bearing. It must therfore be trained and managed by short pruning or simple Guyot pruning. Gringet produces good results on scree slopes.

### Susceptibility to Diseases and Pests

Gringet is susceptible to bud mite disease, powdery mildew and is very sensitive to downy mildew.

#### **Clonal selection in France**

The only certified Gringet clone carries the number 947. A conservatory of 15 or so clones was planted in 1999 in the wine-growing region of Savoie.

Phenology

Bud burst: 9 days after Chasselas. Grape maturity: mid-season, 2 weeks after Chasselas.

### Technological potential

The bunches are large and the berries are small. This variety is more often used to produce sparkling wines (sparkling or semi-sparkling wines). Gringet wines are light, lively with floral notes.
