

# Lival N

Wine and table grape variety.

### Origin

This variety was obtained in 1956 by INRA by crossbreeding Alphonse Lavallée and Lignan.

# Use

Wine and table grape variety.

### Name of the variety in France

Lival

### Synonymy

There is no officially recognized synonym in France nor in the other countries of the European Union, for this variety.

# Regulatory data

In France, Lival is officially listed in the "Catalogue of vine varieties" on the A list. It is classified as a wine grape variety only in some French department (see the regulations in force). This variety is also listed in the catalogues of other Member States of the European Union: Bulgaria and Portugal.

#### **Description elements**

The identification is based on:

- the tip of the young shoot with a high density of prostrate hairs,
- the green young leaves with bronze spots,
- the shoots with a strong anthocyanin coloration of nodes and internodes,
- the circular or wedge-shaped dark green adult leaves, with seven lobes or more, deep round-shaped lateral sinuses, a slightly open U-shaped petiole sinus with often naked petiole veins, medium teeth with straight sides or with one side convex and one side concave, a strong anthocyanin coloration of veins, a moderately blistered leaf blade, and on the lower side of the leaves, a medium density of erect hairs on veins and a low density of erect and prostrate hairs,
- the round-shaped or broad ellipsoid berries.

### Cultivation and agronomic skills

Lival has strong vigor with a horizontal bearing. It must be trained and pruned long. This variety is not very susceptible to millerandage and berries bursting.

# Susceptibility to Diseases and Pests

Lival is susceptible to phomopsis, powdery mildew, downy mildew and mites, but is not very affected by grey rot.

# Clonal selection in France

The only certified Lival clone carries the number 501.

# Phenology

Bud burst: 8 days after Chasselas. Grape maturity: early-season, same as Chasselas.

### **Technological potential**

Lival's bunches are medium to large in size, moderately compact with a moderately long peduncle which is not very lignified. The berries also are medium to large in size with a homegeneous color. The skin is moderately thick, the pulp is averagely firm and very juicy with a simple flavor. Lival has a good storage and transport capacity.
