

# Jaoumet B

## Table grape variety.

### Origin

This table grape variety is originally from the Roussillon region.

### Use

Table grape variety.

### Name of the variety in France

Jaoumet

### Synonymy

There is no officially recognized synonym in France nor in the other countries of the European Union, for this variety.

### Regulatory data

In France, Jaoumet is officially listed in the "Catalogue of vine varieties" on the A list.

### **Description elements**

The identification is based on:

- the tip of the young shoot with a high density of prostrate hairs,
- the yellow young leaves,
- the circular adult leaves, with three, five or seven lobes, deep lateral sinuses, an open U-shaped petiole sinus, medium teeth with straight sides, a weak anthocyanin coloration of veins, a smooth twisted leaf blade, and on the lower side of the leaves, no erect hairs and a low density of prostrate hairs,
- the round-shaped berries.

### Cultivation and agronomic skills

Jaoumet is an early variety, moderately vigorous with a semi-erect bearing which can be pruned short.

Jaoumet has shown to be incompatible with the 57 Richter rootstock.

### **Clonal selection in France**

The only certified Jaoumet clone carries the number 1319.

### Phenology

Bud burst: 3 days before Chasselas. Grape maturity: early-season, same as Chasselas.

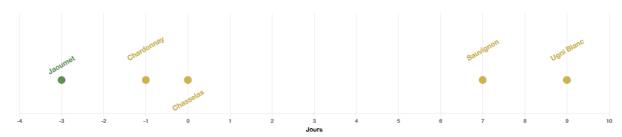

### **Technological potential**

The bunches are compact and small to medium in size. The berries have a simple flavor and are also small to medium in size with a thin skin and juicy pulp.

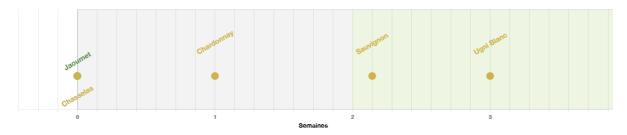

### Susceptibility to Diseases and Pests

Jaoumet is susceptible to grey rot.

#### Debourrement

### Maturité
