---

## Description elements

The identification is based on:

- the tip of the young shoot with a high density of prostrate hairs,
- the yellow young leaves,
- the circular adult leaves, with three, five or seven lobes, deep lateral sinuses, an open U-shaped petiole sinus, medium teeth with straight sides, a weak anthocyanin coloration of veins, a smooth twisted leaf blade, and on the lower side of the leaves, no erect hairs and a low density of prostrate hairs,
- the round-shaped berries.

Allele 2	131	238	239	191	196	258	240	233	271

### Cultivation and agronomic skills

Jaoumet is an early variety, moderately vigorous with a semi-erect bearing which can be pruned short. Jaoumet has shown to be incompatible with the 57 Richter rootstock.

### Clonal selection in France

The only certified Jaoumet clone carries the number 1319.

### Phenology

Bud burst: 4 days before Chasselas.  
Grape maturity: early-season, same as Chasselas.

### Technological potential

The bunches are compact and small to medium in size. The berries have a simple flavor and are also small to medium in size with a thin skin and juicy pulp.

### Susceptibility to Diseases and Pests

Jaoumet is susceptible to grey rot.

### Debourrement

### Maturité
