

# Arriloba B

Wine grape variety.

## Origin

This variety was obtained in 1954 by INRA by crossbreeding Raffiat de Moncade and Sauvignon.

## Use

Wine grape variety.

## Name of the variety in France

Arriloba

## Synonymy

There is no officially recognized synonym in France nor in the other countries of the European Union, for this variety.

## Regulatory data

In France, Arriloba is officially listed in the "Catalogue of vine varieties" on the A list and classified.

---

## Description elements

The identification is based on:

- the green young leaves with bronze spots,
- the adult leaves with three lobes (rarely five lobes), an open U-shaped petiole sinus, long teeth with straight sides, a moderate anthocyanin coloration of veins, a twisted, involute leaf blade, and on the lower side of the leaves, a low to medium density of erect and prostrate hairs,
- the round-shaped berries.

Allele 2	131	229	249	186	188	246	240	245	239

### Cultivation and agronomic skills

This variety is vigorous, fertile and productive. It is sometimes susceptible to dessication of the stems and would appear well adapted to machine harvesting.

### Technological potential

The bunches are medium in size and the berries are very small. The wines produced are quite fine and slightly aromatic.

### Clonal selection in France

The only certified Arriloba clone carries the number 762.

### Susceptibility to Diseases and Pests

Arriloba resists well to grey rot (thick skin).

### Phenology

Bud burst: same as Chasselas.  
Grape maturity: early-season, 1 week after Chasselas.

### Debourrement

### Maturité
