

Attiki N

Table grape variety.

Origin

This variety was obtained by Vassilis Mikos (Greece). Based on the genetic analyses carried out in Montpellier, it would result from the crossbreeding of Alphonse Lavallée and Black Monukka.

Use

Table grape variety.

Name of the variety in France

Attiki

Synonymy

In Austria, Attiki is officially designated as "Attica". This synonym is officially recognized in France regarding plant propagation material.

Regulatory data

In France, Attiki is officially listed in the "Catalogue of vine varieties" on the A list. This variety is also listed in the catalogue of Austria.

Description elements

The identification is based on:

- the tip of the young shoot with a medium density of prostrate hairs,
- the green young leaves with bronze or reddish spots,
- the circular or pentagonal adult leaves, entire or with three lobes, a V-shaped petiole sinus, slightly open or closed, medium teeth with straight sides or one side concave and the other convex, a moderate anthocyanin coloration of veins, a moderately blistered, undulate near the petiole sinus leaf blade, and on the lower side of the leaves, no or very low density of erect and prostrate hairs,
- the obtuse ovoid berries, with a slightly depressed hilum.

Phenology

Bud burst: 8 days before Chasselas.
Grape maturity: early-season, 1 week to 1 week and a half after Chasselas.

Technological potential

Attiki's bunches are large, not very compact and the berries are medium in size. The skin is of moderate thickness and the pulp is firm. Attiki's berries are generally seedless. When the seeds are present, they are soft and not very noticeable. This variety has a simple flavor but has interesting gustatory qualities.
