

Portan N

Wine grape variety.

Origin

This variety obtained by INRA in 1958 is the result of the crossbreeding between Grenache and Portugais bleu.

Use

Wine grape variety.

Name of the variety in France

Portan

Synonymy

There is no officially recognized synonym in France nor in the other countries of the European Union, for this variety.

Regulatory data

In France, Portan is officially listed in the "Catalogue of vine varieties" on the A list and classified.

Description elements

The identification is based on:

- the tip of the young shoot with a low density of prostrate hairs,
- the green young leaves,
- the pentagonal leaves with five lobes, shallow lateral sinuses, a petiole sinus with overlapping lobes, medium teeth with convex or straight sides, no anthocyanin coloration of veins, a twisted, goffered and blistered leaf blade, and on the lower side of the leaves, no or a very low density of erect and prostrate hairs,
- the round-shaped berries.

Cultivation and agronomic skills

Portan is very vigorous. This variety must be trellised and preferably pruned long. It is suited to moderately or not very fertile soils.

Susceptibility to Diseases and Pests

Portan is susceptible to powdery mildew and phomopsis. However, as it is an early variety, it is not very sensitive to grey rot.

Clonal selection in France

The only certified Portan clone carries the number 537.

Phenology

Bud burst: 1 day before Chasselas. Grape maturity: early-season, half a week after Chasselas.

Technological potential

The bunches and berries are medium in size. Due to its earliness and its characteristics, Portan can be used to make primeur wines or wines to be consumed quickly. This variety produces not very tannic, well colored and fruity wines that have moderate alcohol degree.
