# Sulima B

## Table grape variety.

### Origin

Sulima (an interspecific hybride) was obtained in 1966 by INRA. This interspecific hybrid results from the crossbreeding of Verdelet (9110 Seibel) and Sultanine.

### Use

Table grape variety.

### Name of the variety in France

Sulima

### Synonymy

There is no officially recognized synonym in France nor in the other countries of the European Union, for this variety.

### Regulatory data

In France, Sulima is officially listed in the "Catalogue of vine varieties" on the A list.

---

### Description elements

The identification is based on:
- the tip of the young shoot with a medium density of prostrate hairs,
- the green young leaves,
- the circular or wedge-shaped adult leaves, entire or with three or five lobes, with an open U-shaped petiole sinus, medium to long teeth compared to their width at the base with convex sides, a moderate to strong anthocyanin coloration of veins, an involute, moderately blistered leaf blade, and on the lower side of the leaves, no or a very low density of erect and prostrate hairs,
- the ellipsoid or cylindric berries.

| Allele 2 | 143 | 232 | 253 | 191 | 204 | 260 | 248 | 251 | 255 |

### Cultivation and agronomic skills

Sulima is vigorous, fairly fertile with a horizontal bearing. It can be pruned moderately long and must be trained.

### Clonal selection in France

The only certified Sulima clone carries the number 971.

### Phenology

Bud burst: 1 day before Chasselas.
Grape maturity: early-season, 1 week after Chasselas.

### Technological potential

Sulima's bunches are large to very large, not very compact. The berries are small to medium in size, firm with a simple flavor and normal or not very lignified seeds. The skin is thin. Pinching off the grape clusters can improve the presentation.

### Susceptibility to Diseases and Pests

Sulima is not very susceptible to grey rot.
