

Téoulie N

Wine grape variety.

Origin

Téoulie is a variety originally from Provence. Based on genetic analyses carried out in Montpellier, it would result from the crossbreeding of Pougyen and Plant d'Entrechaux.

Use

Wine grape variety.

Name of the variety in France

Téoulie

Synonymy

There is no officially recognized synonym in France nor in the other countries of the European Union, for this variety.

Regulatory data

In France, Téoulie is officially listed in the "Catalogue of vine varieties" on the A list and classified

Description elements

The identification is based on:

- the tip of the young shoot with a high density of prostrate hairs,
- the young leaves with bronze spots,
- the circular adult leaves, with five or seven lobes, a petiole sinus with slightly overlapping lobes, medium to long teeth with straight or convex sides, no anthocyanin coloration of veins, a twisted, revolute and goffered leaf blade, and on the lower side of the leaves, a medium density of erect and prostrate hairs,
- the round-shaped berries.

Allele 2	141	236	249	182	204	256	266	257	261

Cultivation and agronomic skills

Téoulier has an erect bearing and can be trained in gobelet and pruned short. Its early budburst exposes it to the risk of spring frosts.

Clonal selection in France

The only certified Téoulier clone carries the number 1200.

Phenology

Bud burst: 3 days after Chasselas.

Grape maturity: mid-season, 3 weeks after Chasselas.

Technological potential

The bunches and berries are large. Téoulier produces deep colored wines, but that are lacking finesse and elegance. These wines are generally not very acidic and have an average degree of alcohol.

Susceptibility to Diseases and Pests

Téoulier is fairly susceptible to powdery mildew.
