Tibouren N

Wine grape variety.

Origin

Tibouren is a variety grown in the Provence region.

Use

Wine grape variety.

Name of the variety in France

Tibouren

Synonymy

In Italy, Tibouren is officially designated as "Rossese". This synonym is officially recognized in France regarding plant propagation material.

Regulatory data

In France, Tibouren is officially listed in the "Catalogue of vine varieties" on the A list and classified. This variety is also listed in the catalogue of other Member Stated of the European Union: Bulgaria and Italy.

Description elements

The identification is based on:
- the tip of the young shoot with a very high density of prostrate hairs,
- the green young leaves with bronze spots,
- the adult levaes with seven or nine lobes, deep lateral sinuses, an open or slightly open petiole sinus, long teeth compared to their width at the base with straight sides, a weak anthocyanin coloration of veins, a twisted blistered leaf blade, andon the lower side of the leaves, a high density of erect and prostrate hairs,
- the round-shaped berries, with frequently very small berries that stay green.

Allele 2	137	236	249	176	204	260	254	267	251

Cultivation and agronomic skills

Tibouren must be pruned short. It is susceptible to millerandage, dessication of the stemps and appears well suited to acid soils.

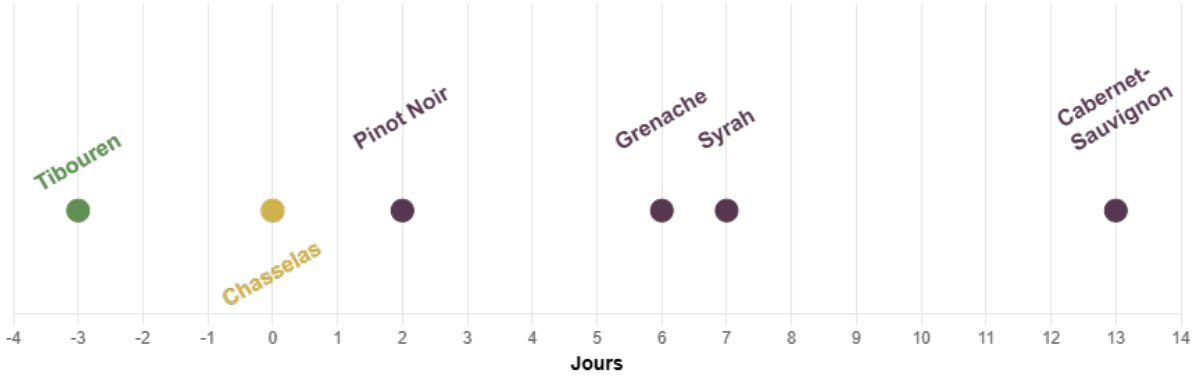

Clonal selection in France

The two certified Tibouren clones carry the numbers 1063 and 1137.

Phenology

Bud burst: 3 days before Chasselas.
Grape maturity: mid-season, 2 weeks after Chasselas.

Debourrement

Technological potential

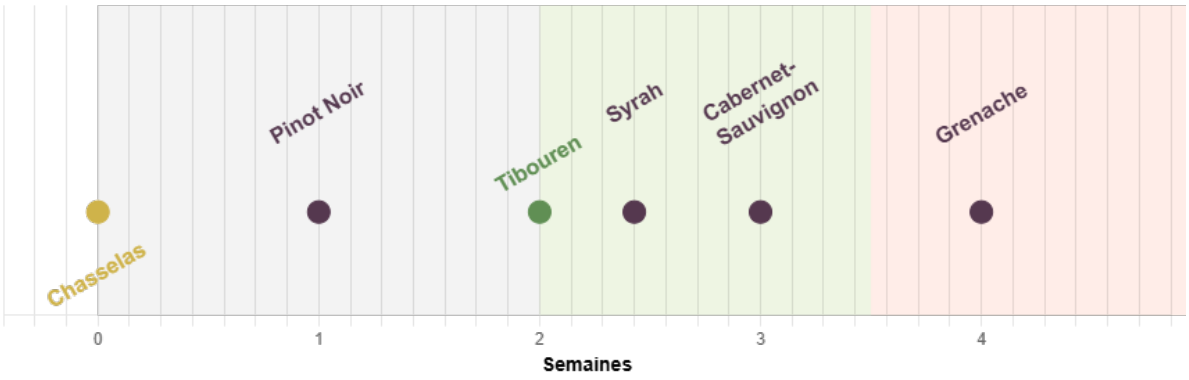

The bunches are medium to large and the berries are medium in size. Tibouren is mostly used for the production of fine and expressive rosé wines. On the nose, these wines are fruity with floral notes. In the mouth, the wines are rather round and full-bodied, relatively long and often marked by oxidative notes.

Susceptibility to Diseases and Pests

Tibouren does not seem particularly susceptible to diseases, except perhaps to mites.
