

# Mècle N

Wine grape variety.

## Origin

This variety is originally from the Isère region.

## Use

Wine grape variety.

## Name of the variety in France

Mècle

## Synonymy

In France, this variety can officially be called "Mescle" regarding plant propagation material.

## Regulatory data

In France, Mècle is officially listed in the "Catalogue of vine varieties" on the A list and classified.

---

## Description elements

The identification is based on:

- the tip of the young shoot with a high density of prostrate hairs,
- the green young leaves,
- the circular adult leaves, with five or seven lobes, a slightly open U-shaped petiole sinus, small to medium teeth, short compared to their width at the base with convex sides, no anthocyanin coloration of veins, a flat or slightly revolute leaf blade, slightly curly on the edges, and on the lower side of the leaves, a low density of prostrate hairs,
- the ellipsoid berries.

### Cultivation and agronomic skills

Mècle is fairly vigorous and can be pruned long. Shoots have a semi-erect bearing.

### Clonal selection in France

The only certified Mècle clone carries the number 1410.

### Phenology

Bud burst: 2 days after Chasselas.  
Grape maturity: mid-season, 3 weeks after Chasselas.

### Technological potential

Mècle's bunches are small to medium in size and the berries are medium. This variety produces tannic, well structured, and colored wines. The sugar accumulation potential of this variety is average.

### Susceptibility to Diseases and Pests

Mècle is susceptible to grey rot.

### Debourrement

### Maturité
