

# Béquignol N

Wine grape variety.

## Origin

Béquignol is originally from the south west of France.

## Use

Wine grape variety.

## Name of the variety in France

Béquignol

## Synonymy

There is no officially recognized synonym in France nor in the other countries of the European Union, for this variety.

## Regulatory data

In France, Bequignol is officially listed in the "Catalogue of vine varieties" on the A list and classified.

## Description elements

The identification is based on:

- the tip of the young shoot with a very high density of prostrate hairs,
- the green young leaves with bronze spots,
- the adult leaves entire or with three or five lobes, an open or slightly open petiole sinus with often a tooth on the edge, moderate to long teeth compared to their width at the base with convex sides, moderate anthocyanin coloration of veins, a twisted, blistered leaf blade, and on the lower side of the leaves, a low to medium density of prostrate hairs,
- the broad ellipsoid berries.

### Cultivation and agronomic skills

Béquignol is a vigorous variety and is fertile when pruned long. It is well adapted to drought conditions.

### Clonal selection in France

The only certified Bequignol clone carries the number 1224.

### Phenology

Bud burst: 7 days after Chasselas.

Grape maturity: mid-season, 2 weeks and a half after Chasselas.

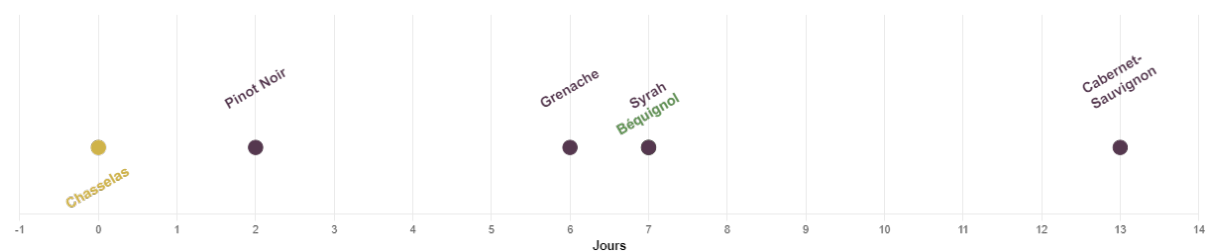

### Technological potential

The bunches are medium in size and the berries are small. Béquignol produces ordinary wines, light bodied, not tannic and are fitted for quick consumption.

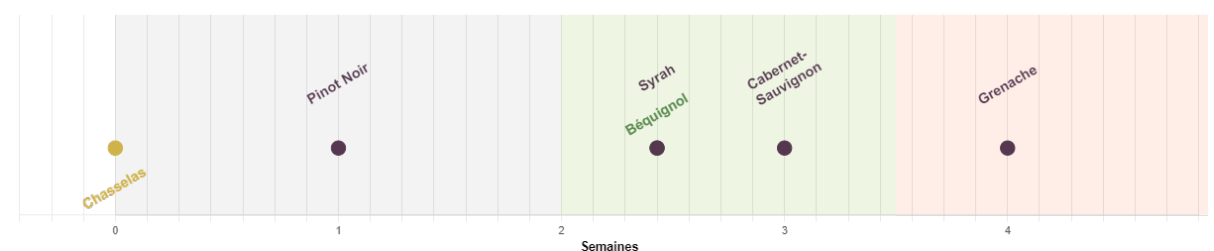

### Susceptibility to Diseases and Pests

Béquignol is sensitive to mites. On the other hand, it is not very affected by grey rot.

### Debourrement

### Maturité
