

Grand noir de la Calmette N

Wine grape variety.

Origin

This variety was obtained by Louis and Henri Bouschet in 1855 à Mauguio (Hérault). Based on genetic analyses carried out in Montpellier, Grand noir de la Calmette would result from a crossbreeding between Petit Bouschet (Aramon x Teinturier du Cher) and Morrastel (Graciano).

Use

Wine grape variety.

Name of the variety in France

Grand noir de la Calmette

Synonymy

In France, this variety can officially be called "Grand noir" regarding plant propagation material. In Bulgaria and Portugal, Grand noir de la Calmette is officially designated as "Grand noir".

Regulatory data

In France, Grand noir de la Calmette is officially listed in the "Catalogue of vine varieties" since 2013 on the A list and classified. This variety is also listed in the catalogues of other Member States of the European Union: Bulgaria, Portugal and Spain.

Description elements

The identification is based on:

- the white tip of the young shoot, with a high density of prostrate hairs,
- the green or yellow young leaves with a high density of prostrate hairs,
- the shoots with red or red-striped internodes,
- the adult leaves with three or five lobes revolute on the edges, deep U-shaped upper lateral sinuses and less pronounced, a slightly open or closed U-shaped petiole sinus, wide teeth, short compared to their width at the base with straight or convex, a weak anthocyanin coloration of veins, a finely blistered flat leaf blade, and on the lower side of the leaves, a medium density of erect and prostrate hairs,
- the round-shaped berries whose pulp is colored.

Cultivation and agronomic skills

Grand noir de la Calmette is relatively vigorous, rather fertile and has an erect bearing. Its foliage turns red in fall. This variety is sensitive to winter frosts but not very susceptible to spring frosts as it has a late bud burst. Grand noir de la Calmette is also a little sensitive to drought and its berries tend to shrivel under the effect of water stress.

Clonal selection in France

There is no certified clone for this variety yet.

Phenology

Bud burst: 7 days after Chasselas.
Grape maturity: mid-season, 3 weeks after Chasselas.

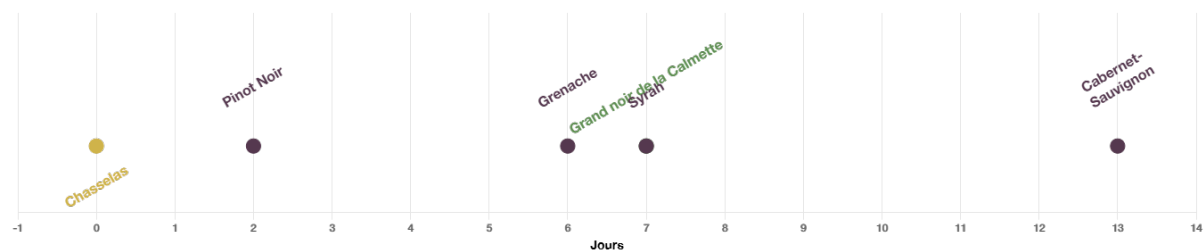

Technological potential

Grand noir de la Calmette's bunches are medium in size and moderately compact. The berries are also medium, simple-flavored, with a thick skin and a juicy pulp. The juices are rather colored. The musts of this teinturier variety can be blended for the production of grape juices. This variety gives astringent, not very alcoholic and rather flat wines with sometimes peppery aromas.

Susceptibility to Diseases and Pests

Grand noir de la Calmette is a rather "rustic" variety, it is moderately sensitive to powdery mildew and to wood diseases. It is a little bit more susceptible to downy mildew.
