

# Goron de Bovernier N

Wine grape variety.

#### Origin

This variety is originally from Switzerland.

#### Use

Wine grape variety.

#### Name of the variety in France

Goron de Bovernier

#### Synonymy

There is no officially recognized synonym in France nor in the other countries of the European Union, for this variety.

#### Regulatory data

In France, Goron de Bovernier is officially listed in the "Catalogue of vine varieties" since 2014 on the B list.

#### **Description elements**

The identification is based on:

- the tip of the young shoot with no or a slight density of prostrate hairs,
- the bronzed young leaves,
- the small to medium adult leaves, with three, five or sometimes seven lobes, an open or slightly open V-shaped petiole sinus, not numerous teeth, short compared to their width at the base with convex or straight sides, no anthocyanin coloration of veins, a slightly blistered leaf blade, sometimes involute, and on the lower side of the leaves, no or a very low density of erect and prostrate hairs,
- the round-shaped berries.

#### Cultivation and agronomic skills

Goron de Bovernier is a vigorous variety with a semierect or horizontal bearing. It is susceptible to magnesium deficiency.

#### **Clonal selection in France**

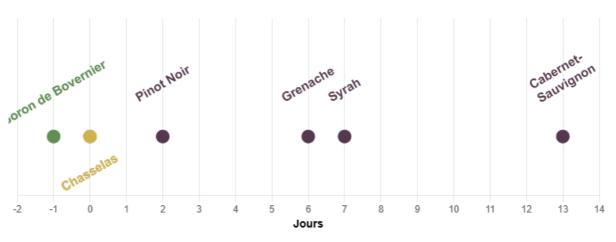

The only certified Goron de Bovernier clone carries the number 1350.

#### Phenology

Grape maturity: mid-season, 3 weeks to 3 weeks and a half after Chasselas.

Bud burst: 1 day after Chasselas.

### Debourrement

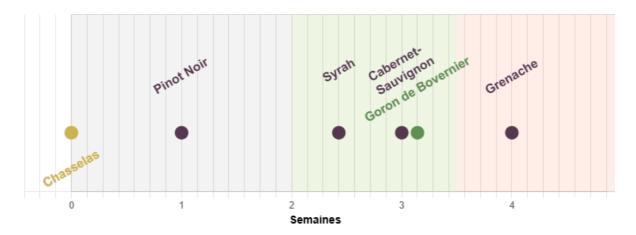

#### **Technological potential**

Boron de Governier's bunches are medium in size and compact. The berries are small to medium in size, simple-flavored, with a thin skin. This variety produces aromatic and moderately alcoholic wines, with a fairly high titrable acidity.

#### Susceptibility to Diseases and Pests

Goron de Bovernir is very sensitive to grey rot.

#### Maturité
