### Cultivation and agronomic skills

Carignan gris has an erect bearing and is resistant to wind. This variety is well adapted to poor soils and to water stress conditions. It should preferentially be pruned short, gobelet or cordon de Royat training systems.

### Clonal selection in France

The only certified Carignan gris clone carries the number 1261.

### Phenology

Bud burst: 12 days after Chasselas.

Grape maturity: very late season, 6 weeks after Chasselas.

### Technological potential

Carignan gris' bunches are medium in size, often winged and rather compact. The aromatic profile may vary a lot depending on the terroir. This variety produces alcoholic wines that can be a show some bitterness.

### Susceptibility to Diseases and Pests

As the black and white version, Carignan gris is very sensitive to powdery mildew.

### Debourrement

### Maturité
