

# Melon rouge Rg

Wine grape variety.

# Origin

This variety corresponds to the red mutation of Melon.

#### Use

Wine grape variety.

#### Name of the variety in France

Melon rouge

#### Synonymy

There is no officially recognized synonym in France nor in the other countries of the European Union, for this variety.

# Regulatory data

In France, Melon rouge is officially listed in the "Catalogue of vine varieties" since 2019 on the A and classified.

### **Description elements**

The description corresponds to that of Melon, except for the berry skin color which is, in this case, red sometimes turning purple, when ripe.

# Genetic profile

Allele 2	141	238	249	182	204	244	254	235	249

#### Cultivation and agronomic skills

The aptitudes are close to those of Melon, with an erect bearing and a similar production.

#### **Clonal selection in France**

The only certified Melon rouge clone carries the number 1292.

#### **Phenology**

Bud burst: 9 days after Chasselas.

Grape maturity: early-season, 1 week after Chasselas.

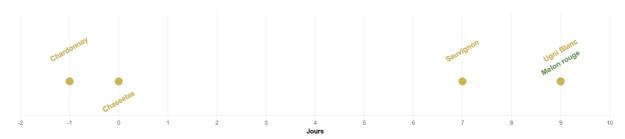

# **Technological potential**

Melon rouge's bunches and berries are small. As Melon, this variety produces not very colored, light, fresh, pale white wines with floral aromas. It can also be used to make rosé wines and sparkling wines, but does not have enough color to produce red wines.

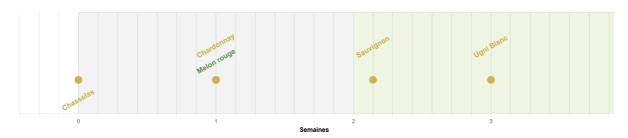

#### Susceptibility to Diseases and Pests

As Melon, this variety is sensitive to downy mildew and less to powdery mildew. It is however less susceptible to grey rot than Melon.

#### Debourrement

# Maturité
