

Colobel N

Wine grape variety.

Origin

Colobel (an interspecific hybrid) would come from the crossbreeding of 6150 Seibel and Plantet (5455 Seibel).

Use

Wine grape variety.

Name of the variety in France

Colobel

Synonymy

In France, this variety can officially be called "8357 Seibel" regarding plant propagation material.

Regulatory data

In France, Colobel is officially listed in the "Catalogue of vine varieties" on the A list and classified.

Description elements

The identification is based on:

- the tip of the young shoot with a low density of prostrate hairs,
- the green young leaves with reddish spots,
- the entire circular adult leaves, with a slightly open V-shaped petiole sinus, medium teeth with straight sides, an involute, shiny, blistered, slightly gophered near the petiole sinus leaf blade which reddens in autumn, and on the lower side of the leaves, no or a very low density of erect and prostrate hairs,
- the round-shaped berries, and the pulp slightly colored.

Cultivation and agronomic skills

Colobel has a moderate vigor and an erect to semi-erect bearing. It can be managed by long pruning.

Susceptibility to Diseases and Pests

Colobel is not very affected by downy mildew but is susceptible to anthracnose and should preferably be grafted.

Clonal selection in France

There is no certified clone for this variety yet.

Bibliographic references

- Catalogue des variétés et clones de vigne cultivés en France. Collectif, 2007, Ed. IFV, Le Grau-du-Roi, France.

Phenology

Bud burst: 2 days after Chasselas.
Grape maturity: late-season, 4 weeks after Chasselas.

Technological potential

The bunches are medium in size, compact and the berries are also medium in size. Colobel produces fairly colored wines of very mediocre quality, with the presence of diglucosid anthocyanins.
