

Feunate N

Wine grape variety.

Origin

This variety would appear to originally be from the Drôme region. Based on published genetic analyses, Feunate is probably a descendant of Gouais blanc and Pougayen.

Use

Wine grape variety.

Name of the variety in France

Feunate

Synonymy

There is no officially recognized synonym in France nor in the other countries of the European Union, for this variety.

Regulatory data

In France, Feunate is officially listed in the "Catalogue of vine varieties" on the A list and classified.

Description elements

The identification is based on:

- the tip of the young shoot with a high density of prostrate hairs,
- the green young leaves with bronze spots,
- the shoots with red internodes,
- the adult leaves, entire or with three or five lobes, shallow U-shaped lateral sinuses, with a closed petiole sinus and overlapping lobes, long teeth with straight sides, a slight anthocyanin coloration of veins, a flat leaf blade, involute on the edges, and on the lower side of the leaves, a medium density of prostrate hairs,
- the ellipsoid berries.

Allele 1	131	236	239	176	188	244	238	245	249
Allele 2	141	238	243	178	196	256	254	247	271

Cultivation and agronomic skills

Feunate is vigorous, fertile, productive, with an erect bearing and must be pruned short.

Clonal selection in France

The only certified Feunate clone carries the number 1225. Surveys have recently been carried out in the wine-growing region of the French department of Drôme.

Phenology

Bud burst: 2 days after Chasselas.
Grape maturity: mid-season, 3 weeks after Chasselas.

Technological potential

The bunches are medium to large and the berries are large. Feunate produces colored wines that are relatively acidic with low alcoholic degree.

Susceptibility to Diseases and Pests

Feunate does not show any particular sensitivity to downy and powdery mildew, but seems a little sensitive to grey rot.
